

Forbes Global 2000 Dashboard

User Guide — How to Navigate and Use Every Feature

Opening the Dashboard

The dashboard is a single self-contained web page: **dashboard/index.html** (with its stylesheet and script alongside it in the same folder). No server, installation, or internet-hosted data is required — the dataset is embedded in the page. Open it in any modern browser by double-clicking the file, or visit the deployed GitHub Pages URL. The only external dependencies are the Chart.js library and Google Fonts, loaded from CDNs.

Layout at a Glance

Area	What it does
Left sidebar	Section navigation (click to scroll to any section) and project credits.
Top KPI row	Five headline numbers: company count, combined sales, combined profit, average profit margin, and company growth rate.
Chart grid	Six linked visualizations (detailed below).
Right filters panel	Country, Industry, Rank Range, and Profitability dropdowns, plus a reset button. Sticky — stays visible when scrolling.
Insights & Recommendations	Auto-generated narrative cards, recomputed from the current filtered subset.
Company Explorer	Searchable, sortable table of every company matching the current filters.

The Charts

- **Market Value Concentration by Rank Tier** — an area chart summing market value across rank brackets of 100. The steep drop-off from the first bracket illustrates how top-heavy the list is.
- **Industry Mix** — a donut of the six largest industries by company count in the current view.
- **Content Distribution by Country** — a heat-grid of the top 18 countries, shaded by company count (deeper gold = more companies).
- **Top 10 Companies** — a leaderboard of the highest market value companies in the current view.
- **Top Industries** — horizontal bar chart of the ten largest industries by count.
- **Profit Margin Distribution** — histogram of companies bucketed by margin band (0–5% up to 100%+).
- **Avg ROA by Rank Tier** — average return on assets across rank brackets of 250.

Using the Filters

All filters combine (AND logic), and every element on the page — KPIs, all charts, the heat-grid, the leaderboard, the insight cards, and the table — updates together the moment any filter changes.

- **Country** — restrict to companies headquartered in one country.

- **Industry** — restrict to one of the 28 industry categories.
- **Rank Range** — Top 100, 101–500, 501–1000, or 1001–2000.
- **Profitability** — Margin above 20%, between 5–20%, or below 5%.
- **Search** (above the table) — live company-name lookup; also narrows every chart and KPI.
- **Reset all filters** — one click returns to the full 2,000-company view.

Reading the Table

Click any column header to sort by it; click again to reverse direction. Margin % and ROA % are color-coded — green for positive, red for negative — echoing stock-ticker conventions. A dash (—) indicates a missing value (one company has no published Market Value). The table shows the first 60 matches; use filters or search to narrow further.

Interpreting the Insights Panel

The six cards are computed, not written in advance. The three **insight** cards report market concentration (share of market value held by the top 10 companies in view), geographic concentration (the leading country's share), and the margin split (share of companies above 20% vs. below 5%). The three gold-bordered **recommendation** cards change their advice based on thresholds — for example, the diversification card only warns when the top 10 hold more than 40% of market value in the current view. Narrow the filters to fewer than 3 companies and the panel will ask you to broaden them, since patterns aren't meaningful at that size.

Troubleshooting

- **Charts don't appear:** the page needs internet access once per session to load Chart.js from its CDN. Check your connection and reload.
- **Fonts look different:** Google Fonts failed to load; the page falls back to system fonts. Purely cosmetic.
- **A filter shows no results:** the combination is too narrow (e.g. a country that has no companies in the selected industry). Use Reset all filters to start over.
